

Economic Growth: Theory and Numerical Solution Methods

ALFONSO NOVALES holds a Ph.D. in Economics from University of Minnesota (1985) and a Ph.D. in Mathematics from Universidad del País Vasco (1983). He was Assistant Professor at State University of New York (Stony Brook) and is currently Professor of Economics at Universidad Complutense (Madrid). He is the author of 'Econometría' and 'Estadística y Econometría', edited by McGrawHill.

ESTHER FERNÁNDEZ is Associate Professor of Economics at the Department of Quantitative Economics at Universidad Complutense (Madrid). She obtained her Ph.D. from Universidad Complutense (1999). She is the author of academic papers on Monetary Theory, Economic Growth and Environmental Economics.

JESÚS RUÍZ is Associate Professor of Economics at the Department of Quantitative Economics at Universidad Complutense (Madrid). He has a Ph.D. in Economics from Universidad Complutense (1997). His research on Economic Policy Evaluation in Dynamic Macroeconomic Models and Environmental Economics has been published in several international academic journals.

Economic Growth

This is a book on deterministic and stochastic Growth Theory and the computational methods needed to produce numerical solutions. Exogenous and endogenous growth models are thoroughly reviewed. Special attention is paid to the use of these models for fiscal and monetary policy analysis. Modern Business Cycle Theory, the New Keynesian Macroeconomics, the class of Dynamic Stochastic General Equilibrium models, can be all considered as special cases of models of economic growth, and they can be analyzed by the theoretical and numerical procedures provided in the textbook. Analytical discussions are presented in full detail. The book is self contained and it is designed so that the student advances in the theoretical and the computational issues in parallel. EXCEL and Matlab files are provided on an accompanying website to illustrate theoretical results as well as to simulate the effects of economic policy interventions. The structure of these program files is described in "Numerical exercise"-type of sections, where the output of these programs is also interpreted.
