

Use of the Normalized Difference Vegetation Index (NDVI) to Assess Land Degradation at Multiple Scales

This report examines the scientific basis for the use of remotely sensed data, particularly Normalized Difference Vegetation Index (NDVI), primarily for the assessment of land degradation at different scales. Use of the Normalized Difference Vegetation Index (NDVI) to Assess Land Degradation at Multiple Scales: Current Status, Future Trends, and Practical Considerations. This was the stern message from the International Assessment of Agricultural Science and the global environment in terms of land degradation; greenhouse gas emissions; Use of the normalized difference vegetation index (NDVI) to assess land degradation at multiple scales: current status, future trends, and practical considerations.
